Tree Species Descriptions

American Arborvitae: A medium growing upright evergreen shrub which grows about 40' at maturity. An excellent windbreak.

Austrian Pine: A rugged fast growing tree well adapted to adverse growing conditions. Dense growth is dark green and needles are rigid. Mature height 50'.

Colorado Blue Spruce: A slower, but most popular conifer. Narrow to broad pyramidal outline with horizontal stiff branches. Needles range from dark green to silver blue. Excellent for ornamental and windbreak plantings. Mature height is 40-60'.

Eastern White Pine: A tall tree with relatively few and horizontal large limbs. Needles are 2-4" long, slender. Cones slender 3-10" long. Bark is dark. Height is 80-110' and 2-3' diameter.

Norway Spruce: One of the fastest growing spruce trees. Slender trunk with short drooping branches forming a very narrow pyramidal shape. Used for windbreaks, grows on most sites except where soil is water-soaked. Mature height is 80-100'.

Eastern Red Cedar: A moderate pyramidal grower that reaches 40-50 feet at maturity. Fruits appear after 10 years of age. Bark is light reddish brown. Not suitable to plant near apple orchards due to cedar apple rust disease.

American Cranberry: A moderate growing large shrub. Showy small white flowers in spring. In late summer the fruit turn bright red and remain on throughout the winter or until harvested by birds. Foliage turns a bright red in fall. Excellent choice for hedges and borders.

Black Cherry: Moderate to rapid grower that will reach 50-60'. Clusters of white flowers from April to June. Fruit will appear June to November as park purple, small clusters of berries.

Black Walnut: A valuable timber tree for veneer and furniture wood. Unlike other hardwood it grows well in most locations. Has delicious nuts.

Pin Oak: Pyramidal tree with glossy dark green leaves that change to bronze or red in the fall. Dried, brown leaves remain on the tree for much of the winter. Light brown acorns provide food for a wide range of animals. Prefers moist, rich, acidic, well-drained soil. Will tolerate clay soil and standing water for a short period. Mature height 40-50'.

Pond Cypress: A deciduous conifer grows to a height of 49-59 feet. Bark is a pale gray color with cones not over 2.5 cm diameter. Grows well in wet areas.

Red Bud: Extremely popular small landscape tree that grows to 25-35'. Clusters of rosy pink flowers appear in April. Reddish-purple

leaves change to dark green then to yellow.

Sawtooth Oak: A medium growing tree that has gray brown bark. Leaves are shiny 2-8" long with bristle-like teeth. Fruit—acorns which are excellent for wildlife. Prefers moderately to well-drained soils.

Tulip Poplar: A fast growing large shade tree that can grown 15-20' over a 6-8 year period. This large stately deciduous tree is not a good choice for small sites. Unusual maple-like leaves. Flowers that are greenish-yellow with orange appear in the summer. Mature height 70-90 feet.

White Flowering Dogwood: A low branching tree with beautiful white flowers in spring. Dark green leaves over summer turn reddish purple in the fall. Red berries in fall are an attraction to wildlife. Does best in rich, moist soil, but is known to grow well in average well-drained soil also.

Wildflower Seed: Consists of a blend of flower seeds with 12 different annual and 17 perennial species adapted for this area. Flowers will bloom from early spring into fall, and covers approx. 300 sq. ft.

Bird & Butterfly Seed: Each packet contains 18 different annual and 5 perennial varieties. This is designed to attract both bird and butterfly, and covers approx. 300 sq. ft.

Semi Dwarf Fruit Trees-

Apple—Honeycrisp: An annual bearing, fruit that consistently averages 3" diameter or more, pale yellow background with scarlet stripe. Ripe in September. Requires a pollinator.

Apple—Crimson Gala: Early ripening Gala that's crisp, firm and juicy with a sweet flavor. Ripens in October. Requires a pollinator.

Pear—Bartlett: Best known of all pears, with smooth yellow skin, and juicy flesh for canning and fresh use. Ripens in September.

Peach—Red Haven: Mid season ripening variety that fruits heavily, and is very hardy for northern climates. Ripens in August.

Marking flags are also available at the SWCD office. They are priced at 25-\$4.00; 50-\$6.00; 100-\$10.00 in yellow, red, orange, white, fluorescent pink or green.
